Aryan Verma

AI/ML Engineer | LLMs & RAG | Real-Time Computer Vision

8435684227 aryan.verma.work.01@gmail.com LinkedIn GitHub Bhopal, India

PROFESSIONAL SUMMARY

AI/ML Engineer and final-year Computer Science student specializing in computer vision and biometric systems. Proven experience building and deploying end-to-end AI applications, including real-time pose estimation for fitness tracking and facial/voice recognition for automated attendance. Adept at translating complex machine learning models into accessible, user-facing web applications.

EDUCATION

Oriental Institute of Science and Technology | Bhopal 2023 - 2027

Bachelor of Technology (B.Tech) – Computer Science & Engineering

PROJECTS

AI-Powered Real-Time Gym Trainer | Github Live Demo Landing Page

- Developed an **AI-powered fitness application** that utilizes **computer vision** to analyze exercise movements and provide real-time workout feedback. Built with **Python** and **OpenCV**, the application supports exercise recognition, repetition counting, and form assessment. The project aims to help users improve exercise technique, track workout performance, and enhance accessibility in fitness training.

Technologies & Tools : *Python, OpenCV, MediaPipe, Streamlit, WebRTC, Large Language Models (LLMs), SQLite*

SnapClass — AI-Powered Attendance System | Github Live Demo Landing Page

- Developed an **AI-powered attendance system** utilizing **Face Recognition and Voice Biometrics**. Features include group photo recognition, voice-based attendance, QR enrollment, and cloud-based attendance management.

Technologies & Tools : *Python, OpenCV, Scikit-learn, Flask, Supabase, Streamlit*

CreditWise — Loan Approval Prediction | Github Live Demo

- Developed a machine learning classification project to predict loan approval outcomes using applicant financial and demographic data.
- Performed exploratory data analysis (EDA), missing-value handling, categorical encoding, and feature preprocessing.
- Implemented and compared Logistic Regression, K-Nearest Neighbors (KNN), and Naive Bayes classification models to evaluate predictive performance.

Technologies & Tools : *Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn*

SmartCart — Customer Segmentation | Github Live Demo

- Developed an unsupervised machine learning project to segment customers based on behavioral and demographic features.
- Performed exploratory data analysis, data preprocessing, feature engineering, and dimensionality reduction using Principal Component Analysis (PCA).
- Applied K-Means and Agglomerative Clustering, using the Elbow Method and Silhouette Score to evaluate clustering quality and identify customer segments.

Technologies & Tools : *Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn*

SKILLS

Programming Languages	:	Python
Machine Learning & Data Science	:	Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, Machine Learning, Data Preprocessing, Feature Engineering, Model Evaluation
Generative AI & LLMs	:	Large Language Models (LLMs), Prompt Engineering, Retrieval-Augmented Generation (RAG), NLP, AI Agents, Agentic AI, Multi-Agent Systems
Developer Tools & Platforms	:	Git, GitHub, Jupyter Notebook, VS Code, Google Colab, Streamlit
Databases	:	SQL, MySQL
AI Frameworks & Tools	:	Agno, Google Gemini, Groq API
